

Dear students,  
we would like to inform you about an upcoming change in the operation of the dormitory internet network (KolejNet).

### **What is changing?**

We plan to include the internet fee directly in the accommodation price. The internet will no longer be a separate paid service but will become a standard part of dormitory services – similar to utilities or cleaning of shared spaces.

### **What does this mean in practice?**

- Immediate internet access upon arrival – no device registration or setup required
- Connection via Eduroam – simply using your university account
- Less administration – no payments and MAC address registrations
- Improved Wi-Fi in the future – we will invest more into modernizing the wireless network

### **What about the price?**

As part of this change, the accommodation price will increase by 7 CZK per day, which will cover the internet service now provided to all residents. It is important to note that:

- the internet will no longer be a separately paid service
- all individual fees, registrations, and administration will be eliminated
- the service will be automatically available to everyone without limitation

### **Why are we making this change?**

Internet access is now a standard requirement for both studying and everyday life. We want it to be available for everyone, simple to use, and corresponding to a modern technical university.

### **When will the change take effect?**

We plan to implement this change from the beginning of the new academic year to ensure a smooth transition. We believe that this change will bring you greater comfort, simpler operation, and higher-quality internet connection in the dormitories.

Thank you for your cooperation and we wish you a pleasant stay in the dormitories.
